ECONOMIC ORGANIZATION

CONTROL OF WEALTH

In former times, the island as a whole apparently did not function in the control of land, reefs, or other native wealth. Today, however, there are on Wale five talo beds (*ui*) which are controlled by the island. These are termed *ui wenua*. After the tidal wave of 1914, the Island Council divided some of the talo lands owned by the maternal lineages among all the people of the island in order to tide over a temporary food shortage. These lands have remained under the control of the whole island since that time. Their names are: Ui lua wumi (*2* beds), Ui alapai, Ui kolomui, Ui angatonu.

In economic matters today as formerly, the ultimate controlling units are the village groups. These are independent of each other and may utilize their lands and reefs in any way they wish; in practice, however, they all conform to the same pattern of control.

VILLAGE PROPERTY

REEFS

The barrier reef (*te ayanga loa*) and all fishing grounds on the reef, inside and outside the lagoon, are divided among the villages as follows:

The reef from Wale to Matautu, the northern point of Motu Ko, belongs to Ngake; no men or canoes other than those of Ngake are allowed on or near this part of the reef. The reef between Matawea, the western point of Motu Ko, and Motu Kotawa is divided into halves (*itu*), one half belonging to Ngake, the other to Yato. The reef fishing from Motu Kotawa to Wale belongs to Yato, but because lagoon fishing in former times was controlled by Ngake, the men of Yato could fish only outside this reef. Without permission from Ngake villagers men of Yato could not go to their reserve by canoe across the lagoon but had either to coast along the outside of the reef or to walk along the reef shelf. The outer, northern reef, running round the reserve of Nitu (the northwestern side of Wale) as far as the boundary of the Loto reserve of Uta, was controlled by Yato; the outer reef from this point to the eastern boundary of Uta was controlled by Loto; the rest of the reef running past Utupoa to the main reef was controlled by Ngake. Each village had the right to the beach and lagoon fishing on its own shore (*tukutai*). The rest of the lagoon away from the village frontages belonged to Ngake.

The control of reefs, though apparently weighted heavily against the village of Loto, worked with a certain flexibility. The men of Ngake announced at frequent intervals to the men of the other two villages that they might fish in the lagoon for one moon. At the end of the period the lagoon was tapu for all save Ngake men. All economic tapus (*lau*i) were supported by supernatural sanctions. The two villages benefiting by this generosity took gifts of food, usually nuts and talo, to Ngake in payment for benefits received. Special gifts were sometimes given as when Yato made an expedition to Motu Kotawa and returned with extra supplies of *takapu* birds (tern).

these hillocks were raised as the result of human excavations with such primitive implements.

Traditions state that the talo beds on Motu Ko were started by the migrants from the legendary land, Yayake, and were continued later by the Pukapukans after the people of Yayake were all killed. Both on Wale and on Motu Ko, excavations continue to this day. The beds that a man digs out are his own property during his life; on his death they are passed on down the paternal descent line. Picks and shovels borrowed from the resident agent help to render excavation today less laborious than it must have been in earlier times.

The village-controlled talo beds (*motu*) are separated into three divisions, one each for the men, women, and children of the village. Each year the number on the village rolls is altered through birth, death, the addition of those attaining sociological adulthood, and affiliation (*tau*) of new members; and a redivision is made of the beds of the members of each class on the village roll. The shares of dead adults are taken by new adults (*wakatane* and *wakawawine*), whose shares in turn are given to new-born children. This redivision (*kotikotinga*) is made by a village meeting at the talo beds. All attend, even children, as a matter of course. The argument, discussion, and division are carried out by the guard and elders of the village; sitting on a near-by hillock, the others watch and assist with free advice and witticisms.

The new boundaries are marked by stones and coconut midrib butts. These soon fall down, but not before the new divisions have been memorized. The actual size of the village allotments varies somewhat from year to year, but in general a piece of land about 3 yards square is the average size of the division for man, woman, or child. Twice a year all the village women gather leaves and plants to fertilize the beds. Each adult cultivates his and his children's land how and when he pleases. The guards inspect the reserve land beds each month and fine each cultivator who has allowed his land to get weedy. The appropriate fine of three pennies or six mature coconuts is kept by the guards for their trouble in levying and collecting it.

The system is flexible and seems to work well. Each household receives an amount of talo land commensurate with its size. The system insures that none shall starve while others hoard up lands they cannot cultivate. Supervision by the guards keeps the land in good condition. The talo beds that a household derives from these village lands are supplemented by lands owned through lineage descent.

Paternal Lineage Property

Lands within village boundaries not controlled by the village unit are controlled by the paternal and maternal descent groups. On Wale, each paternal lineage (*fo*) controls a section of land (*kaasa*) of indeterminate
